16. Help and good practice

How the work flows

1. A client asks for work. You (or an employee) record an **enquiry** and add the **services** the client needs.
2. Each service becomes a record with its own number, an assigned employee, a document checklist and a fee.
3. The client sends documents through the client portal, or staff upload them. Each document is **verified** or **rejected**.
4. The employee does the work and moves the service forward until it is **completed**.
5. Payments are **recorded** against the enquiry. Clients see everything in their portal.

> **As an Admin you can** see and manage everything for the firm: every enquiry, service, client and payment; the masters (services, employees, designations); the Audit Log; and the firm's Settings.

1. Getting started

Signing in

1. Open the staff sign-in page in your browser (your firm will give you the address).
2. Enter your **email** and **password** and sign in. You arrive on the **Dashboard**.
3. If you forget your password, click **Forgot password?** on the sign-in page.

Changing your password

Click your name at the top right and choose **Change Password**. Enter your current password and then the new one twice. The screen shows how strong the new password is and which rules it meets. Use at least 8 characters, and mix letters, numbers and symbols.

Signing out

Click your name at the top right and choose **Log out**. Always do this on a shared computer.

The browser tab

The tab title shows the firm name, your role and the page, for example **KK Raj & Co - Admin - Dashboard**. The firm logo is the tab icon.

> **Adding another Admin.** Admin access is managed by your software provider, Netiapps Software Pvt Ltd. If someone needs Admin access, or an Admin leaves, please contact them.

2. The screen at a glance

- **Left menu**: Dashboard, Enquiries, Clients, Services, Payments and Reports. Under **Masters**: Master Services, Master Employees and Master Designations. Under **System**: Audit Log and Settings.
- **Menu button** (three lines, top left): hides or shows the left menu on wide screens. The browser remembers your choice.
- **Search box** (top): type at least 2 characters and press Enter. It searches services, enquiries and clients by number, name, phone or email, with a **View** button on each result.
- **Financial year**: shows the current financial year (April to March).
- **Bell**: your notifications, with a red number for unread ones.
- **Your name** (top right): Change Password and Log out.
- **Breadcrumbs** (the "Dashboard > Services > ..." line) show where you are and take you back.
- **Footer**: "Designed and maintained by Netiapps Software Pvt Ltd", with a link to their website.

Working with lists

- Use the search box above a table to filter it quickly.
- Click a column heading to sort. Lists show 10 rows per page; use the page numbers at the bottom.
- Click the **eye** icon to view a record, and the **pencil** icon to edit it.
- Phone numbers and email addresses in lists are clickable: click a number to call, an email to write.

3. The Admin dashboard

The dashboard is the firm's overview for today. Every figure comes from live data.

Cards at the top

Five cards, each comparing with last month where it makes sense. Click a card to open the related list.

- **New enquiries** this month.
- **Open services**, with how many were opened in the last 7 days.
- **Completed** services this month.
- **Fees pending** and how many clients owe them.
- **Fees received** this month.

Needs attention

The things that most need you, each with a button that takes you straight to the right place. A line appears only when it applies:

- **Services ready for final payment**: work is completed but fees are not fully recorded. Button: *Record payments*.
- **Documents waiting from clients**, and how many clients have waited more than 15 days. Button: *View list*.
- **Services open more than 30 days**, with the oldest one. Button: *View services*.
- **Services not assigned**. Button: *Assign*.

The rest of the page

- **Open services by status** with a total.
- **Recent enquiries**: the five newest, with client, number of services, who created it and the total.
- **Staff workload**: each employee's open services and the services they completed this financial year. A red number means a heavy load.
- **Recent payments**: the five latest.

4. Enquiries

An **enquiry** is one request from a client. It can contain several services. Open **Enquiries** to see the list, or click **+ New Enquiry** to create one.

Creating an enquiry

1. Choose the **client**: search by name, phone or email. For a new client, add their name, mobile number and email there and then.
2. Tick the setting that lets the client receive email updates, if they agree to it.
3. Add the **services**: use the search box in the list and click a service. Its price and GST are filled in from Master Services.
4. Choose who each service is **assigned to**, or leave it unassigned and assign it later.
5. Check the **Summary** (subtotal, GST, total) and save.

The enquiry gets a number such as `ENQ-2026-0001`, and each service its own, such as `SRV-2026-0001`. You can change the prefixes in Settings.

> **Only Admins** can give a **discount** or change the **price** of a service on an enquiry. Employees cannot.

Viewing an enquiry

The enquiry page shows the client, each service with its progress, the fee breakdown, payments made, notes and the activity history. Use **Make payment** there to record a payment against the whole enquiry.

5. Clients

- **Clients** lists everyone with phone, email, open and total services, fees pending, status and portal status.
- Click the **eye** to view a client, the **pencil** to edit, or **Add client** to create one.
- The client page has a **Portal access** panel with their login email, whether they have activated the portal, and when they last signed in.
- A client's mobile number and email must not be shared with another client.
- Set a client to **inactive** to stop them signing in to the portal. Their records are kept.

> **Tip:** the client's **email** is also how they sign in to the client portal, so check it is right. They use it to receive a one-time login code the first time.

6. Services and documents

Open **Services** to see every service. The **Open Services** tab shows work in progress and the **Completed** tab shows finished services (filter by date). The **Open for** column shows how many days a service has been open. Click **View** to open one.

The service page

- **Top card**: the service name, number, status, payment status, the client with phone and email, who it is assigned to, the date created and how long it has been open, and the fee with GST.
- **Progress bar**: Documents, Verification, Work in progress, Submitted, Completed, Paid.
- **Documents**: the checklist, each marked Mandatory or Optional, with its status.
- **Update status**, the **Timeline** of everything that happened, the **Fee** panel, **Assignment** and a link to the **Same enquiry**.

Documents: upload, verify, reject

1. **Upload** a document for the client with the Upload (or Re-upload) button. Some documents ask for typed text; use Enter.
2. A new upload is **Awaiting check**. Open it with **View**, then click **Verify** if it is correct.
3. If it is not acceptable, click **Reject** and give a clear **reason**. The client is told by email and in the portal and can upload a corrected copy.
4. Every upload is kept as a numbered **version**. Click **History** to see all versions, who uploaded them and any rejection reasons.

Status

Most statuses change **automatically** as documents progress: Documents Pending, Partially Received, Documents Received, Under Verification, Additional Documents Required and Work In Progress. You set three by hand, in the **Update status** panel, with an optional comment that appears in the timeline:

- **Submitted to Department**: the work has been filed.
- **On Hold**: paused.
- **Task Completed**: finished. After this the status can no longer be changed.

Assign or reassign `Admin only`

In the **Assignment** panel, search for an employee and click **Reassign**. The new person is notified in the app and by email, and other Admins are told too. Only Admins can reassign.

7. Payments

Payments are recorded against an **enquiry**, because one payment can cover several services. Each service shows **Unpaid**, **Partially Paid** or **Fully Paid** automatically.

Recording a payment

1. Open **Payments** (or click **Make payment** on an enquiry or service).
2. Choose the enquiry, enter the **amount** and **date**, and choose the **mode**: UPI, Bank transfer, Cash or Cheque.
3. Add a reference (for example the UPI transaction number) and a note if useful, then save.

The client is emailed an acknowledgement and sees the payment in the portal. Other Admins are notified.

Also on the Payments page

- Payments received, and enquiries with fees still pending, with filters and search.
- An **Excel export** of the list.
- You can edit a payment. **Only Admins can delete one**, and the deletion is recorded in the Audit Log.

> **Remember:** the client's **How to pay** window shows the bank and UPI details you entered in **Settings > Payment Details**. Keep them up to date. The client is asked to put a reference like `MANOJ-87587` in the payment note, so you can match it.

8. Reports

1. Open **Reports** and choose a report from the list.
2. Set the dates and any filters offered for that report.
3. Click **View report**. The result appears with totals.
4. Click **Excel** to download it as a spreadsheet. Dates in the file are in day-month-year format.

The reports

Report	What it shows
Fees collected	Payments received in a period. Filter by service, staff and payment mode.
Fees pending	Unpaid fees, oldest first, as on a date.
Service-wise summary	Billed, received and pending per service.
Month-wise summary	Billed, received and pending per month, for a financial year.
Services by status	Every service and where it stands.
Staff work	Assigned, completed and open services per person.
Pending documents	Documents clients still need to upload.
Enquiries	Enquiries received and their totals.
Client history	All services for one client.

9. Master Services

The catalogue of services the firm offers. Services, their prices and their document checklists all start here.

Adding or editing a service

- **Details**: name, description, default price, GST percentage, and whether the price already includes GST. A fee preview shows the total as you type.
- **Document checklist**: add each document the client must send. For each one set the **name**, optional **instructions** for the client, **Mandatory** or **Optional**, whether the client sends a **File** or types **Text**, the allowed formats and the maximum size. Drag the handle to change the order.
- You can mark a service **inactive** so it can no longer be added to new enquiries.

> **A document that is already used on existing services cannot be removed.** The system will say so. Mark it **Optional** instead.

The list

The list shows each service with its price and the number of documents. Click the document count to see the checklist in a pop-up without leaving the page.

10. Master Employees

Everyone who works in the system as an employee.

Adding an employee

1. Click **Add Employee** and enter the name, email, mobile number, gender and designation. A photo is optional.
2. Leave **Active** switched on so they can sign in.
3. Save. The system emails them an invitation with a link to set their own password. The link works for **7 days**.

If the invitation expires or is lost, open the list and click **Resend invitation**.

> **No email arriving?** Check Settings: **Email notifications** must be on. While **Test mode** is on, every email goes to the test address, not to the employee.

Other things you can do

- Click an employee to see their open services by status, recent services and their account details.
- Edit their details, or switch them to **inactive** when they leave. They can no longer sign in, but their history stays.
- Reassign their services to someone else from each service page.

11. Master Designations

Job titles such as Senior Associate or Tax Consultant. They are used when you add employees and in the Staff work report.

- Add a designation with the form on the page, and give it a clear name.
- Edit the name, or switch it to **inactive** when it is no longer used.
- The page shows which employees hold each designation.

12. Audit Log

A permanent record of who did what and when. It is the first place to look if something looks wrong.

- **Cards at the top**: actions today, sign-ins today, records changed and failed sign-ins.
- **The table**: date and time, who did it, the action (for example Created, Updated, Logged in), the module, the record and the details.
- Use the search box and the **date range** to narrow it down. Click a record to open it where possible.
- Click **Export** to download the log.

It records sign-ins and failed sign-ins, changes to enquiries, services, clients and employees, document decisions, payments and deletions, changes to Settings, and email-template edits.

> **Tip:** several failed sign-ins for one person may mean someone is guessing the password. Ask the person to change it.

13. Settings

Open **Settings** from the System menu. It has three tabs and two switches.

Firm Profile

Enter the **firm name**, the **address** and upload your **logo** (PNG, JPG or WebP, up to 2 MB). They appear in the menu, the client portal, the sign-in pages, the browser tab and every email. To go back to the default logo, tick *Remove my logo* and save.

Payment Details

Enter how clients can pay. They see it in the **How to pay** window of their portal.

- **UPI ID**, for example `name@bank`.
- **Bank transfer**: account name, account number, IFSC code and bank and branch.
- **Extra instructions**: anything else, such as "cheques in favour of the firm".

Leave a section empty to hide it. The **Pay at office** tab always shows, using your address from Firm Profile. Clients see changes straight away.

Email Templates

The wording of every email the system sends. Click the pencil next to a template to edit its subject and message. Words in double curly brackets, such as `{{customer_name}}`, are filled in automatically; the screen lists which ones you can use. A few must stay in the message, or the email would not work, for example the password link.

Email notifications and Test mode

Switch	What it does
Email notifications	The master switch. When **off**, no email is sent at all.
Test mode	When **on**, every email goes to one test address instead of the real person. Use it while testing. **Turn it off before relying on the system with real clients and staff.**

Numbering

Set the letters at the start of service and enquiry numbers, for example `SRV` and `ENQ`. Changing them affects new numbers.

14. Notifications and emails

The bell

The bell shows your latest notifications. Click one to open the related page; it is then marked as read. Open **All notifications** to see the full list, mark everything read, and choose which kinds you want to receive (documents, services, payments, enquiries, clients, security).

As an Admin you are told about, for example, new enquiries, payments received, payments deleted by an employee, services assigned, new clients added by an employee, documents uploaded and verified, and failed sign-in attempts.

Emails the system sends

To	When
You (Admin)	A new enquiry is recorded. A payment is received. An employee deletes a payment. A service is assigned to someone else. An employee adds a new client.
Employees	Their account is created. A service is assigned to them. A document is uploaded on their service.
Clients	Their one-time login code. Their service is completed. Their payment is recorded. One of their documents is rejected.

- All emails use a formal tone, and you can edit the wording in Email Templates.
- You are never emailed about something you did yourself.
- A client who switched off **Email updates** in their profile does not get the completed and payment emails, but always gets a rejected-document email.

15. What your clients see

Knowing the client side helps you support them. Clients have their own address for the client portal.

- **Signing in**: the client enters the email on their record. The first time they receive a one-time code by email, then choose a password. After that they sign in with email and password.
- **Dashboard**: active services, documents needed, amount due and completed services. Each card opens the related page. A "Needs your attention" list shows what to do next.
- **My services**: a progress bar, the document checklist (they can upload, re-upload and view their own files), a timeline and the fee.
- **Payments**: fees billed, paid and pending, a list of payments, and a **Make payment** button that opens the **How to pay** window.
- **Updates**: what has happened (documents verified or rejected, service in progress, completed, payment received).
- **Profile**: their details, password change and the Email updates switch.

> **If a client cannot sign in:** check that the email on their client page is correct, that the client is **active**, and that no other client has the same email.

16. Help and good practice

Problem	What to do
Someone forgot their password	For an employee, use **Resend invitation** in Master Employees, or they can use "Forgot password?" on the sign-in page.
An employee cannot see a service	Employees only see services assigned to them. Assign it to them.
A client did not get an email	Check their email address, that they have not switched off Email updates, that Settings > Email notifications is on and **Test mode is off**. Ask them to check Spam.
The wrong bank details show for clients	Update them in Settings > Payment Details.
Someone made a mistake in a status or payment	Correct it and check the Audit Log to see what happened.
Something looks broken or a page shows an error	Refresh with Ctrl+F5. If it continues, note the page and what you clicked, and contact Netiapps Software Pvt Ltd.

Good practice

- Keep Settings accurate: firm name, address, logo and payment details are shown to clients.
- Do not share your password. Change it if you think someone knows it.
- Give clear reasons when rejecting a document, because the client reads them.
- Record payments on the day you receive them.
- Review **Needs attention** on the dashboard every day, and assign any unassigned services.
- Switch employees to **inactive** as soon as they leave.
- Turn **Test mode** off only when you are ready for real emails to reach clients.

For help with the system, please contact Netiapps Software Pvt Ltd, who designed and maintain it (www.netiapps.com).
